Sistem Informasi Geografis BP Batam

Geographic Information Systems BP Batam

Dalam rangka mendukung visi misi BP Batam yaitu Menjadi Pengelola Kawasan Tujuan Investasi Terbaik di Asia Pasifik, maka dikembangkan webGIS BP Batam yang terintegrasi dengan website E-Public BP Batam www.bpmatam.go.id sehingga memudahkan bagi investor untuk mendapatkan informasi umum dan situasi seputar Kota Batam sebagai kawasan FTZ

In order to support the vision and mission of BP Batam Being a business area that is the Best Investment Destination in Asia Pacific, then developed WebGIS BP Batam integrated with the website E-Public BP Batam www.bpmatam.go.id making it easier for investors to obtain general information and situations as the area around the city of Batam FTZ

Link untuk mengakses webGIS dari website resmi BP Batam :

www.bpmatam.go.id

Link to access WebGIS from the official website of BP Batam:

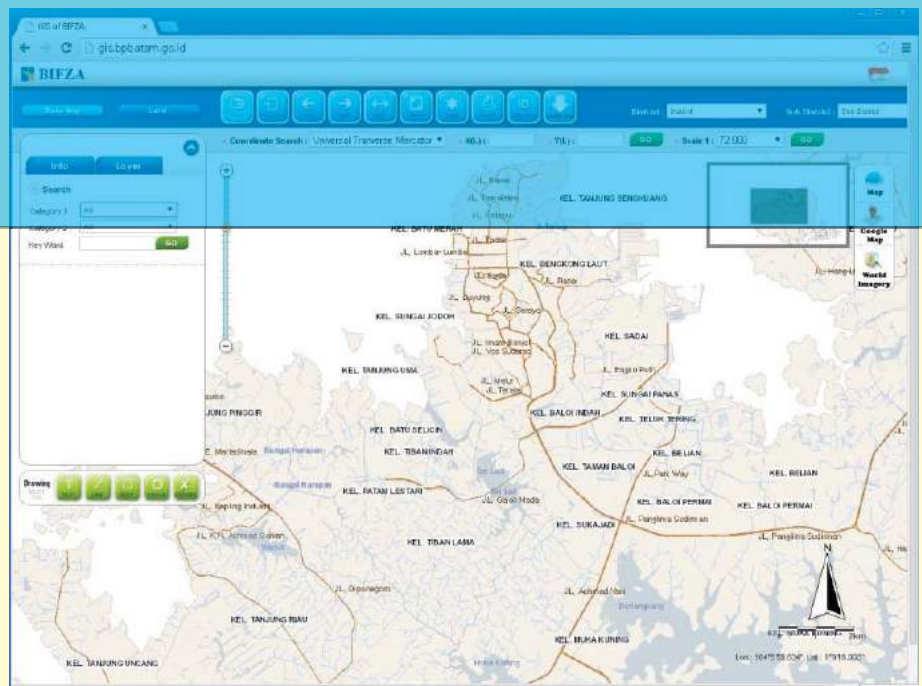

www.bpmatam.go.id

Investor dari luar Batam baik dalam negeri maupun luar negeri yang belum mengetahui situasi dan kondisi Kota Batam bisa mendapatkan gambaran

awal dengan mengakses website

www.bpmatam.go.id yang telah terintegrasi dengan webGIS BP Batam.

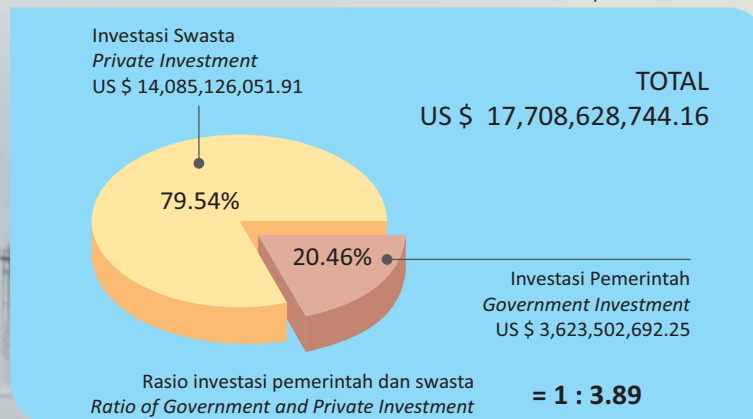

Investors from outside Batam both domestically and abroad who do not know the circumstances of Batam city can get a first overview by accessing the website which has integrated with www.bpmatam.go.id WebGIS BP Batam.

Stasiun Meteorologi (Stamet) Hang Nadim Batam

Hang Nadim Batam Meteorological Station

Pengukuran intensitas curah hujan (presipitasi) oleh radar cuaca berdasarkan seberapa besar pancaran energi radar yang dipantulkan kembali oleh butiran-butiran air di dalam awan dan digambarkan dengan produk Reflectivity yang memiliki besaran satuan dBZ (decibel).
Rainfall Intensity Measurements (presipitasi) by weather radar based on how much energy beam radar that is reflected back by water droplets in clouds and illustrated with a reflectivity product that has a magnitude unit of DBZ (decibels).

Automatic Weather Station (AWS) adalah serangkaian sensor-sensor meteorologi yang disusun secara terpadu dan secara otomatis mencatat data-data meteorologi. AWS dipasang di 9 titik yaitu: Nongsa, Muka Kuning, Sei Harapan, Sei Ladi, Tanjung Piayu, Tanjung Uncang, Tanjung Sengkuang, Jembatan II Bareleng, Pagoda Pulau Galang.
Automatic Weather Station (AWS) is a series of meteorological sensors arranged in an integrated and automatically records meteorological data. AWS installed at 9 points, which are: Nongsa, Muka Kuning, Sei Harapan, Sei Ladi, Tanjung Piayu, Tanjung Uncang, Tanjung Sengkuang, Bareleng 2nd Bridge, Galang Island Pagoda.

Ground Satellite Receiver berguna untuk pengamatan cuaca jarak jauh dengan cakupan area yang luas. Jenis Satelit yang mengirimkan sinyal ke Ground Satellite Receiver ada 2 macam yaitu Geostasioner (Satelit MTSAT) dan Polar Orbital (Satelit NOAA).
Ground Satellite Receiver is useful for in distance weather observation with wide area coverage. There are two Types of satellites that send signals to the Ground Satellite Receiver which are Geostationary (MTSAT Satellite) and the Polar Orbital (NOAA).

Aeromet Web adalah peralatan meteorologi yang tersinergi dalam suatu website dan digunakan dalam pelayanan penerbangan untuk memberikan informasi meteorologi yang terangkum dalam flight documents

Aeromet site is a meteorological equipment synergy in a website and use for in flight services to provide meteorological information that is summarized in flight documents.
